

MembrainRTC – The flexibel Solution

Integration of different Clients

- Smartphones/Tablets (Android, WinPhone, iOS, BlackBerry)
- Mobile Devices based on Pocket-PC, Embedded XP or Palm-OS
- RFID-Devices (BRI-Standard), Scanner

Connection of different systems and technologies

- ERP-Systemes (SAP R/3 etc.)
- Datenbases (SQL, OLE, ODBC)
- File-Systems
- Control Systems
- Other systems (p.e. Catia)
- HTTP- and WEB-Services
- Mailservices

High security and performance

- Secure brodacast in wireless networks
- Resistant to radio shadow
- Error-free communication
- Handling large volumens of data
- Low administrative overhead

Service- und objectoriented architecture

- Functions for different Clients and Services

Multidirectional communication

- Communication between Server und Client and also between Client and Client
- MembrainRTC serves as a RFC-Server
- Administration tool to configure the RTC
- Selective assignment of authorizations

Monitoring and testing

- Permanent monitoring is possible
- Emulation options

Rapid Prototyping

- Uses the Standard IDE
- Quick and cost-effective to implement
